

Patient self-check-in and self-registration streamlines a patient's hospital experience and saves on staff resources. PatientWay Kiosk links to existing hospital ADT and scheduling systems - allowing a patient to confirm their demographics, scheduled appointment and check-in. Linking with PatientWay PreReg, walk-in patients self-register by providing their demographics at a kiosk. Registration clerks simply confirm their details and complete the registration.

Handle routine tasks such as demographic confirmation at a self-service kiosk

### Walk-in Registrations

Non pre-registered patients - such as emergency room or diagnostic imaging - provide their demographics for admission at the kiosk. Stepping through a series of screens with easy to complete questions, all demographic responses are sent to a designated queue for processing by a clerk.

### Process Automation

As patients complete their registration or check-in PatientWay Kiosk automates tasks such as printing forms, wrist bands, updating tracking boards and other systems, even logging data to databases. PatientWay Kiosk can even send an email or text message based on criteria you determine.

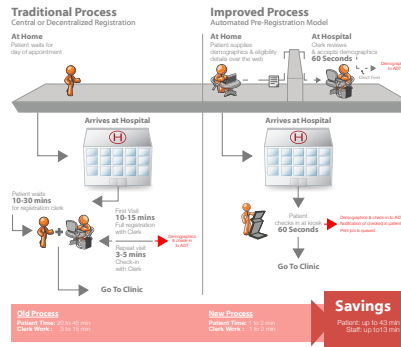

### Express Check-in Pre-Registered Patients

Patients identify themselves by swiping an identity card, scanning a barcode, or keying in their identification using an on-screen keyboard. Behind the scenes PatientWay Kiosk recalls the patient's demographics and appointment information. Completed registrations are processed automatically. Registrations with exceptions are still handled by staff. Successful check-ins conclude with clinic wayfinding instructions.

### Arrival Queue

Clinic staff see at a glance when patients arrived and checked-in. Details for registrations requiring assistance are available at the click of a mouse.
